

Network and Security Managed Services

In today's digital age, cyber threats are constantly evolving, and businesses must prioritize the security of their IT infrastructure. A single data breach or network failure can have devastating consequences, leading to financial losses, damage to reputation, and loss of customer trust.

TB Technologies offers a holistic approach to security, covering network and data protection, disaster recovery planning, and policy establishment. We monitor your network and infrastructure to ensure up-to-date security patches, back up retention tools, and efficient network protection.

TB Technologies provides a comprehensive suite of services to maintain the security and integrity of networks, systems, and data. Our team of experts helps organizations, communities, and governments identify potential security risks, implement best practices for network and data security, and provide ongoing support and maintenance to ensure their systems remain secure and up to date. Our team understands the importance of safeguarding valuable digital assets and works diligently to protect clients from evolving cyber threats, providing a holistic approach to IT security.

Managed Services

At TB Technologies, we understand that every client's IT infrastructure is unique and requires a tailored approach to ensure maximum security. That's why our team of experts works closely with our current and future clients to assess specific needs and develop customized solutions that align with their business goals. From managing firewalls and intrusion detection systems to creating disaster recovery plans and establishing IT policies, we have the expertise to keep IT infrastructures secure and compliant.

Specific solutions include:

- **Security management:** Managing firewalls, intrusion detection, anti-malware, anti-virus, anti-spam, and network security monitoring
- **Infrastructure administration:** Managing servers, storage, and network administration
- **On-premises or remote helpdesk support:** Providing technical support to clients either on-premises or remotely
- **Network monitoring:** Monitoring network performance, identifying and resolving network issues, and ensuring network uptime
- **Data backup:** Backing up data to ensure business continuity in case of data loss
- **Disaster recovery planning:** Creating a plan to recover from disasters such as natural calamities, cyber attacks, and other unforeseen events
- **Policy establishment:** Creating guidelines for data security, access control, and other IT-related policies
