

American Rescue Plan Act (ARPA) Global Match for Mitigation Programs

The American Rescue Plan Act of 2021 (ARPA) authorizes economic adjustment assistance to address and offset necessary expenses for responding to economic injuries caused by Coronavirus (COVID-19). Economic injury causes bi-directional harm – financial injury to an individual affects their ability to pay fees and taxes that fund services, and diminished governmental services affects the individual’s safety and well-being.

What can ARPA funds be used for?

ARPA allows for grant funds to be used for partial or full replacement of monies lost or not realized by communities due to the COVID-19 economic injury. Funds are awarded through several federal agencies and managed in accordance with existing agency laws, regulations and policies.

Recipients of ARPA may also use a federally-approved process to “global match” non-ARPA hazard mitigation grants. Because COVID-19 weakened many governmental revenue streams, local governments may be in need of funds to aid in disaster recovery and fulfill federal cost sharing requirements. Use of global match allows states, territories, tribes and local communities to creatively implement recovery and hazard mitigation solutions without stressing their operating or contingency budgets.

Mitigation is key to success

Reductions in hazard risks to people and property are the cornerstone of many federal assistance programs. In most cases, hazard mitigation grants are awarded using a cost-share formula, with the majority share being federal and the remaining portion the responsibility of non-federal contributors.

Tidal Basin has expertise in the development, implementation, and management of complex hazard mitigation measures designed to bring about the minimization of loss of life and damages to public and private property.

Bringing it all together

Navigating the complexities of each agency’s program can be difficult for local units of government, tribal entities and even states and territories. Integrating federal resources is not always an easy task. Program rules vary among federal agencies and there can be tension and uncertainty among federal, state and local partners. Additionally, the administrative burdens mandated by differing federal grants can create roadblocks due to conflicting interpretations of rules, redundancies in documentation, and actual incompatibilities.

Tidal Basin understands the global match environment and engages partners to overcome typical “pitfalls” through effective dialogue, use of correct technical language with each different partner (this is critical), and careful oversight of the calculations being used to credit and debit global match accounts.

ARPA program priorities include:

- Respond to or mitigate the public health emergency with respect to COVID-19 emergency or its negative economic impacts
- Make necessary investments in water, sewer or broadband infrastructure
- Provide government services to the extent of the reduction in revenue due to the public health emergency
- Respond to workers performing essential work during the COVID-19 pandemic
