

Continuity of Operations (COOP) and Business Continuity Plan (BCP)

Tidal Basin provides comprehensive solutions to state and local governments, private businesses, and nonprofit organizations to address the effects of emergencies and catastrophic disasters; ensuring the well-being of the affected community, the integrity of critical infrastructure, and long-term economic recovery.

Utilizing risk-based and whole-community perspective, we assist in the development of effective planning, training, exercises, and assessments. Our focus on strategic planning, gap analysis, and after-action reports helps to outline the future as well as set goals for response, recovery, and mitigation capabilities.

Preparing For A Crisis

Regardless of scale, an unexpected threat or hazard can interrupt the functions and livelihoods of your organization or community indefinitely. We utilize our unique expertise and resources to consider all factors and scenarios, working closely with each client to place them in a position to maintain essential functions during any event.

A Continuity of Operations (COOP) plan can help an organization:

- Identify the essential functions crucial to maintaining vital services.
- Identify the required resources, actions, procedures, and interdependencies to provide a framework for continuing these functions and restoring operations.
- Continue to perform the most essential functions, even in a time of crisis.
- Ensure that there is a well-defined prioritization of functions and systems which will allow organizations to be more resilient in the face of service disruptions.

A Business Continuity Plan (BCP) will outline how your business can continue to operate during an unplanned disruption in service. It might contain contingencies for processes, assets, human resources, and partner relationships.

Whether you are an organization in need of a COOP plan, or a business looking for a BCP, preparing ahead will allow you to continue essential operations and recover to pre-disaster conditions so you, your organization, and constituents can get back up and running sooner.
